This training course will help you perfect Excel development using the VBA language. You'll learn how to optimize your automated applications, make them more reliable, improve the user interface and use Windows APIs.

Teaching objectives

At the end of the training, the participant will be able to:

- ✓ Build and optimize a VBA development project in Excel
- ✓ Use the error manager to detect and correct problems
- ✓ Create a dialog interface with the user in Excel using dialog boxes and messages
- ✓ Develop data processing, display and publish data, using VBA programming

Intended audience

Anyone wishing to develop VBA applications in Excel.

Prerequisites

Good basic knowledge of VBA and Excel or knowledge equivalent to that provided by the course "Excel, developing applications in VBA, level 1" (Ref. BAV).

Practical details

Hands-on work

Discussions and practical exercises.

Teaching methods

Active pedagogy based on exchanges, practical exercises and assessment of acquired skills throughout the course.

Course schedule

PARTICIPANTS

Anyone wishing to develop VBA applications in Excel.

PREREQUISITES

Good basic knowledge of VBA and Excel or knowledge equivalent to that provided by the course "Excel, developing applications in VBA, level 1" (Ref. BAV).

TRAINER QUALIFICATIONS

The experts leading the training are specialists in the covered subjects. They have been approved by our instructional teams for both their professional knowledge and their teaching ability, for each course they teach. They have at least five to ten years of experience in their field and hold (or have held) decision-making positions in companies.

ASSESSMENT TERMS

The trainer evaluates each participant's academic progress throughout the training using multiple choice, scenarios, hands-on work and more.

Participants also complete a placement test before and after the course to measure the skills they've developed.

1 A reminder of the basics of development

- Recorded macros: advantages and limitations.
- Understand classic objects: application, workbook, sheet, range.
- Master basic syntax: conditionals and loops, variables and constants.
- Manage recoverable errors in code. Identify error types and use debugging tools.

Hands-on work

Limit Select instructions to optimize code. Use an error handler.

2 Advanced syntaxes

- Use object variables, array variables and dynamic arrays.
- Create custom functions and a library of complementary macros (AddIn).
- Call a procedure or function with ByRef or ByVal arguments.
- Using Windows APIs: key APIs for Excel development.

Hands-on work

Analyze a project and structure it with subprograms. Create functions that can be accessed from other workbooks.

3 Advanced Excel objects, events

- Create lists, filters, subtotals, pivot tables: construction and manipulation through programming.
- Use Excel's calculation functions in VBA (WorksheetFunction).
- Automate graph creation and modification with VBA.
- Use workbook and sheet events. Use the Cancel argument. Secure workbook opening.

Hands-on work

Build a DCT or graph with VBA. Automate the implementation of calculated results on a range of cells.

4 User interface

- Program the import of external data (txt, csv...).
- Set parameters for opening and saving an Excel file (GetOpenFileName).
- Build a Userform containing multi-selection, cascading drop-down lists.

Hands-on work

Use a dialog box or UserForm to open an external file and process its data.

5 Other applications and file management

- Referencing a bookstore.
- Program the link with Word or PowerPoint: use automation.
- Access files in a folder (Dir or FileSystemObject).

Hands-on work

Automate a programmed table in Word or PowerPoint. Create, rename and delete files in a folder.

TEACHING AIDS AND TECHNICAL RESOURCES

- The main teaching aids and instructional methods used in the training are audiovisual aids, documentation and course material, hands-on application exercises and corrected exercises for practical training courses, case studies and coverage of real cases for training seminars.
- At the end of each course or seminar, ORSYS provides participants with a course evaluation questionnaire that is analysed by our instructional teams.
- A check-in sheet for each half-day of attendance is provided at the end of the training, along with a course completion certificate if the trainee attended the entire session.

TERMS AND DEADLINES

Registration must be completed 24 hours before the start of the training.

ACCESSIBILITY FOR PEOPLE WITH DISABILITIES

Do you need special accessibility accommodations? Contact Mrs. Fosse, Disability Manager, at psh-accueil@orsys.fr to review your request and its feasibility.

6 ENI certification

- Examination procedures.
- Personalized advice.

Options

Certification : 80 € HT

The ENI certification "Excel Macros and VBA language" is optional when you register for this course. Accessible online 24 hours a day or in person at a partner center, the assessment is timed (1h30) and includes practical cases and a MCQ/QCU. The practical cases, which reproduce a realistic work environment, are worth five times more than a MCQ/QCU question. The score out of 1000 determines the level reached: operational (500 to 700 points) or advanced (701 to 1000 points). Certification is obtained from 500 points and certifies skills in task automation, macro development and VBA programming on Excel. Results are available immediately after the test, and the certificate is sent by e-mail. This certification is registered under number RS6430 with the Répertoire Spécifique de France Compétences.

Times

Courses take place from 09:00 to 12:30 and from 14:00 to 17:30.

Participants may arrive beginning at 08:45. Breaks and lunches are complimentary.

For four- and five-day hands-on courses, sessions end at 16:00 on the last day of the course, regardless of the teaching mode..
