At the end of the training, the participant will be able to:

- ✓ Understand the benefits of unit testing as part of a quality approach
- ✓ Install, configure and use PHPUnit
- ✓ Discover different approaches to test writing
- ✓ Analyze your code and produce metrics

Intended audience

PHP developers, software architects.

Prerequisites

Good knowledge of object-oriented programming (OOP) and PHP.

Practical details

Hands-on work

Learn how to use the tool, get a new development off to a good start or make an existing application more reliable.

Participants also complete a placement test before and after the course to measure the skills they've developed.

TEACHING AIDS AND TECHNICAL RESOURCES

- The main teaching aids and instructional methods used in the training are audiovisual aids, documentation and course material, hands-on application exercises and corrected exercises for practical training courses, case studies and coverage of real cases for training seminars.

- At the end of each course or seminar, ORSYS provides participants with a course evaluation questionnaire that is analysed by our instructional teams.

- A check-in sheet for each half-day of attendance is provided at the end of the training, along with a course completion certificate if the trainee attended the entire session.
