

Course : Perl language, advanced programming

Practical course - 2d - 14h00 - Ref. LAP

Price : 1250 € E.T.

This course will teach you how to improve the performance of your programs and maintain them efficiently. You'll master the main kernel primitives, the creation of graphical interfaces and input masks. Finally, you'll discover the more modern approach of Object-oriented programming.

Teaching objectives

At the end of the training, the participant will be able to:

- ✓ Handling system functions with Perl
- ✓ Implementing Object concepts
- ✓ Using Perl/Tk
- ✓ Implementing GTK

Intended audience

IT specialists involved in operating procedures in Unix, Linux or Windows environments.

Prerequisites

Good knowledge of the Perl language or knowledge equivalent to that acquired in the course "Perl language" ref. PRL.

Course schedule

1 System programming

- Reminder of process principles: fork and exec.
- Reminder of the principles of signal management.
- Send a signal to processes: the kill function.
- Signal management: sigtrap pragma, installing a signal manager.
- Programming sockets and services from IO::Socket to Net::Server.
- Introduction to thread programming.

Hands-on work

Write Perl programs to manipulate system functions.

PARTICIPANTS

IT specialists involved in operating procedures in Unix, Linux or Windows environments.

PREREQUISITES

Good knowledge of the Perl language or knowledge equivalent to that acquired in the course "Perl language" ref. PRL.

TRAINER QUALIFICATIONS

The experts leading the training are specialists in the covered subjects. They have been approved by our instructional teams for both their professional knowledge and their teaching ability, for each course they teach. They have at least five to ten years of experience in their field and hold (or have held) decision-making positions in companies.

ASSESSMENT TERMS

The trainer evaluates each participant's academic progress throughout the training using multiple choice, scenarios, hands-on work and more.

Participants also complete a placement test before and after the course to measure the skills they've developed.

2 Perl and the Object

- Some definitions : Object-oriented programming, class, instance, constructor, destructor, inheritance...
- Object implementation: package for class, hash for attributes, functions for methods.
- Instance creation: the blessing (bless) of the object reference.
- Program a builder.
- Act when the object is destroyed, the DESTROY method.
- Inheritance: the @ISA array and the UNIVERSAL class.
- Method overload, use of SUPER.
- Abstraction: the future of the object in Perl, from Class::Std and Class::Accessor to Moose.

Hands-on work

Class programming. Implement object concepts (inheritance, overloading, etc.).

3 Graphical user interface: from Perl/Tk to GTK

- Understand and maintain code written in Perl/Tk.
- Presentation and installation of Perl/Tk.
- Geometry manager: Pack, Grid, Place.
- Widgets by family.
- Buttons: Button, Checkbutton, Radiobutton.
- Label and entry field: Label, Entry.
- Scrollbar, Listbox, Menubutton, Optionmenu, Text.
- Containers: Canvas, Frame, Toplevel.

Hands-on work

Creation of an application with a graphical interface in Perl/Tk and event-driven management.

4 Writing new code using GTK

- Link between Perl and GTK: install GTK and its libraries.
- Widgets: hierarchy, creation, keyboard gas pedals, basic containers...
- Widget: signals and events.
- Button types: toggle, radio...

Hands-on work

Handling various components: buttons, button box, frame widget, etc.

5 Developments

- Perl 5.10, 5.12, 5.14 features.
- Perl 6: a new language.
- New features: sigils, static and dynamic typing, formal function parameters.
- A true object language.
- Junctions and lazy evaluation.

TEACHING AIDS AND TECHNICAL RESOURCES

- The main teaching aids and instructional methods used in the training are audiovisual aids, documentation and course material, hands-on application exercises and corrected exercises for practical training courses, case studies and coverage of real cases for training seminars.
- At the end of each course or seminar, ORSYS provides participants with a course evaluation questionnaire that is analysed by our instructional teams.
- A check-in sheet for each half-day of attendance is provided at the end of the training, along with a course completion certificate if the trainee attended the entire session.

TERMS AND DEADLINES

Registration must be completed 24 hours before the start of the training.

ACCESSIBILITY FOR PEOPLE WITH DISABILITIES

Do you need special accessibility accommodations? Contact Mrs. Fosse, Disability Manager, at psh-accueil@orsys.fr to review your request and its feasibility.
